Supervisor guide

You look after the tills and the cashiers during the day. You sign in at a till with your username and PIN, and in the back office (a web browser) with your e-mail and password.

Every morning

1. Check that every till shows **Connected** (bottom right). If one says *working offline*, it still sells — tell IT.
2. Check **Sales** → **Review queue** in the back office: anything a till sent that the server refused (a price that changed, stock that ran out on a strict item). Fix it, then press **Retry refused** on that till.
3. Make sure each cashier opens their own shift with a counted float.

During the day

Situation	What you do
Discount above the cashier's limit	At the till, type your username and PIN in the approval box. Only approve what you would do yourself: it is recorded under your name.
Return without a receipt	Approve at the till; check the item came from your shop.
Cashier locked out (5 wrong PINs)	Wait 15 minutes, or a manager sets a new PIN: back office → **People & access** → **Users** → the cashier → **Set POS PIN**.
A sale "stuck" on a till	Do not ring it again. Check the yellow bar: it counts sales waiting to send. They go on their own.
Red bar on a till	The server refused a sale: open **Sales** → **Review queue**, read the reason, fix, then **Retry refused**.
Printer prints nothing	Check paper and power. Desktop till app: **Printer and scale set-up** on the receipt screen. Then **Report a problem**.

End of the day

1. Each cashier closes their shift, counts the cash, and types what the MoMo merchant phone and card terminal show. You see over/short in **Sales** → **Till shifts**: the cash in *Over / short*, MoMo and card in *MoMo & card* (red when short; hover for each network). **Shift report** prints the shift: cash, takings by payment method and the MoMo / card check, with a line for your signature. A MoMo difference is not put in the books automatically (a payment can arrive late): check the transaction IDs on the receipts (Sales → Sales) against the MoMo statement.
2. Any difference above the limit: talk to the cashier, add a note, tell the manager.

A shift that stays open (the till was reinstalled or replaced, or someone left without closing): a manager opens **Sales** → **Till shifts**, the shift → **Close shift**, enters the cash actually there and why. **A count typed wrongly** (e.g. 4000 for 40): **Correct the count** with the right amount and why. The shift keeps its original count; the corrected figure shows with a ✎ (hover for the original, who and why), and the books are put right automatically. Both need the manager's cash set-up permission and are in the audit log. 3. **During the parallel run** (if your shop has one): the manager enters the old system's day totals in **System** → **Go-live**; help find any sale rung up in only one system.

Practise first

In the **practice company** (purple PRACTICE bar), try: a discount approval, a return without receipt, closing a shift with a short of 5.00, and fixing an item in the review queue.
