Teller quick card

Keep this card at the till. Practise first in the **practice company** (a purple **PRACTICE** bar shows at the top): nothing there is real.

Start of the day

1. **Sign in** — your username and PIN. Five wrong PINs lock you out for 15 minutes; a supervisor can reset it.
2. **Open shift** — count the cash in the drawer and type it in as the opening float. **With vaults** (your shop uses a Cashier): take the tray the Cashier gives you, count the float in it, choose your vault on the till, tick *I have counted the float* and open. If the float is wrong, do not open: give the tray back.

Selling

To…	Do this
Add an item	Scan the barcode, or type part of the name and press **Enter**
Check a price	Type part of the name: the list shows each item's price (and each pack size's) without adding it
Search again	**F2**
Sell a carton	Scan the carton barcode, or tap **+ CTN**
Change the quantity	Type it in **Qty**, press **Enter**
Weigh (loose goods)	Put it on the scale, tap **Weigh**
Remove a line	✕ at the end of the line
Wholesale price	Change **Price list** at the top (only if allowed)
Customer on account / loyalty	**Customer** → search name or phone
Pay	**F12** or **Pay**

A **red line** has no price on that list: it cannot be sold on it.

Where the shop has switched it on, each item shows **how many are left** (e.g. *14 TAB left*). **None left** in red: the system shows no more in stock; tell a supervisor.

Details, comment and calculator

- **Details** (next to Clear): the walk-in's **name and phone** (no customer record needed), a **comment** (tick *Print the comment on the receipt* if the customer should see it), and in a pharmacy the patient's **age, sex, weight** and pregnancy. Some branches ask for a name or phone before payment: the till tells you.
- **Calculator (F1)**: tap or type a sum (`200 + 10%` = 220). On the payment screen, **Calculator** → **Use as amount** puts the result in *Cash received*.
- **Change:** the payment screen shows the change in notes and coins (e.g. 1 × GH₵20 · 1 × GH₵5).

Taking payment

- **Cash** — tap the amount handed over (or type it). The change shows and prints.
- **Mobile money** — choose the network, enter the **transaction ID** from the customer's confirmation message. Accept only after you see the confirmation.
- **Card** — run the card on the terminal first, then enter the approval code from the slip.
- **Mixed** — e.g. part MoMo, rest cash. The sale completes when nothing is left to pay.

Then **Print receipt** (prints straight away on the desktop till's receipt printer), or **Show print preview** to look at it first, or **Send receipt** by SMS/WhatsApp/e-mail. Then **New sale**.

Returns and mistakes

- **Return** — scan or type the receipt number, choose the items, give the reason. Without a receipt you need a supervisor.
- **Discount above your limit** — a supervisor approves with their username and PIN.
- **Wrong item rung up** — remove the line before paying. After payment it is a return: never ring the sale up again.

When the network or server is down

The bottom right says **"Server not answering — working offline"** or **"No network"**. **Keep selling.** Sales are kept on the till and sent on their own when the server is back. A yellow bar counts what is waiting. **Never ring a sale up twice.** A red bar means the server refused something: call your supervisor.

End of the shift

Close shift → count **all** the cash in the drawer (float included), note by note and coin by coin. Under **Mobile money and card**, type what the MoMo merchant phone shows for your shift for each network (MTN, Telecel, AT) and the card terminal's total; leave a box empty if you do not take it → **Close shift**. Only then do you see over/short, for the cash and for each MoMo network and the card. Add a note if there is a difference. Sign out.

With vaults: you do not see the expected figure. Close the tray and hand it to the Cashier, who counts it again.

Something wrong?

Tap **Report a problem** (bottom of the screen): say what you did and what happened. Support gets it with the screen you were on. Then tell your supervisor.
